GitHub: github.com/pimeys

Languages: Finnish (mother), English (proficient)

EDUCATION

Aalto University

Espoo, FI

Master of Science

2006–2011

- Major: “Software Engineering and Business”
- Minor: “Multimedia Technology”
- Dropped out from the university when moved to Berlin in 2011

EXPERIENCE

Prisma (prisma.io)

Berlin, DE

Software Engineer (Rust)

Feb 2019–

- Bootstrapped Prisma from Scala to Rust, bringing the Scala devs up to speed with the new language.
- Wrote big parts of the Rust engines [13].
- Design, implementation [20] and documentation [19] of a low level, asynchronous and runtime-independent Microsoft SQL Server library for Rust.
- Discovery [6] and design [5] of the multi-schema product.
- Design, implementation [15] and documentation [14] of an SQL query builder and connector library for Rust.
- Design [4] and implementation [7] of PostgreSQL special index types.
- Implementation [8] of MongoDB schema introspection.
- Implementation [12] of PostgreSQL extensions in the Prisma Schema Language, introspection and migrations.
- Re-design and organization of SQL introspection codebase [17].

360dialog (www.360dialog.com)

Berlin, DE

Senior Software Engineer (Rust, Clojure, Scala, Lua, C++)

Apr 2016–Sep 2018

- Design and implementation of push notification service [1] sending large amount of notifications to Apple’s [2], Google’s [3] and Web Push [21] platforms in Rust.
- Design and implementation of a RESTful API for campaign management, where customers could upload and transpile campaigns [18].
- Maintaining and extending an in-house rule engine and virtual machine to execute campaign programs for millions of users. The system allows a custom program to be executed for every user and is written with C++ and Lua.
- Maintaining and extending a code generator to create campaigns for the rule engine to run using Clojure. Handled a complete refactoring of the library and extended it to handle more use cases.

Fyber (www.fyber.com)

Berlin, DE

Senior Software Engineer (Ruby, Scala)

Sep 2011–Mar 2016

- Rewrote several parts of an advertisement service with Scala, including a high traffic tracker service and publisher callback system.
- Designed and Implemented a statistics service and library with ZeroMQ, Ruby and Exasol.
- Part of a core team to build a new backend infrastructure, implementing the ZeroMQ and Ruby based service from scratch.

PROJECTS

- Software reproducibility, using Nix and NixOS [16] on my main desktop, laptop and server operating system [9]. Maintainer of a few Nix packages [10].
- Building an open source home automation system as my pandemic project, and still on that path.
- Hacking with my diabetes, operating an open source artificial pancreas [11].
